Re: EZVI Injection with Badger Injection Solutions Technology

Dear Randy:

This letter is a formal update regarding the EZVI injection project that TEA implemented with Renegade Environmental Services during August 2008. First, let me tell you that the project has produced excellent results. In the past twelve months we have reduced groundwater TCE (source material) concentrations from over 400 ppm to non-detect levels. In addition, total organo-chlorine mass (inclusive of TCE and all daughter products) has been reduced by greater than 85% since the injection event. **These results are only possible when you combine a high quality in-situ product with a superior subsurface delivery and distribution system.**

As in the past, TEA is extremely pleased and excited with the interaction between our companies during this critical project. The knowledge of subsurface injections and the Badger Technology, along with the excellent work ethic supplied by your personnel were crucial to the success of this project.

We look forward to working with you again in the very near future.

Best Regards,

J. Greg Booth, Ph.D.
Director of Remediation Technologies/
Senior Project Manager

Toxicological & Environmental Associates, Inc.
